

PATENT

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicants:	Louis S. Crocker, et al.		
Serial No.:	10/660,936	Case:	21063DACB
Filed:	September 12, 2003		
For:	POLYMORPHIC, AMORPHOUS AND HYDRATED FORMS OF 5-CHLORO-3-(4- METHANESULFONYLPHENYL)-6'-METHYL- [2,3']BIPYRIDINYL		

Art Unit:
1625

Examiner:
Davis, Z.N.

Assistant Commissioner for Patents
Washington, D.C. 20231

DECLARATION OF LOUIS S. CROCKER
PURSUANT TO 37 C.F.R. 1.131

Sir:

I, Louis S. Crocker, hereby declare the following:

1. I was awarded a Bachelor's degree in 1983 by Middlebury College, Middlebury, Vermont.
2. I was awarded a Ph. D. degree in 1989 by Yale University, New Haven, Connecticut.
3. I am a joint inventor named in the referenced patent application.
4. I have been employed by Merck & Co., Inc. continuously since June, 1992 and currently hold the title of Senior Research Fellow in the Department of Analytical Research.

5. Attached hereto is a reproduction of a notebook entry (Merck Research Laboratories Notebook page 17538-74) made by me that I signed and dated prior to July 11, 1997. This entry describes several analyses that were performed on a sample of L-791,456 free base (the compound of Formula A as referred to in the above-referenced application). The particular analyses performed on the sample are XRPD (X-ray powder diffraction), TG (Thermogravimetric analysis), DSC (Differential scanning calorimetry), and Acid Titration. The result of the XRPD analysis is noted as "Crystalline material" and indicates that the X-ray powder diffraction pattern contained well-resolved peaks characteristic of crystalline material. The pattern of peaks observed in the noted XRPD pattern is characteristic of Form I and differs from patterns obtained from other crystalline phases of L-791,456 free base.

6. I hereby declare that all statements made herein of my own knowledge are true and that all statement made of information and belief are believed to be true and further that these statements are made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issuing thereon.

3 Feb 2004
Date

Respectfully submitted,

Louis S. Crocker

Bas. Acid Titration file 24, 27, 97

0.1N HCl. No clear endpoint observed at the
low pH's obtained in the vicinity of the expected
endpoint. Sample of 22.760mg (R-25) undissolved
in 5ml H₂O, undiss. 5ml H₂O + 2ml MeOH, dissolved
in 5ml H₂O + 5ml MeOH, titrated in this solvent.
